SCOPE OF WORK

Terms of Supplement provide: "Contractor, as an independent Contractor and not as an agent of the Government, shall continue to devote its best efforts and facilities for a period of twelve months from the effective date of this supplemental agreement in research and investigation of the sensitivity of explosives to setback pressure. Pursuant thereto, it is understood that Contractor shall engage in approximately 1500 additional shots or firings.

SUMMARY

Under the sponsorship and direction of Picatinny Arsenal, Mr. Samuel Stein, Project Officer, we have been investigating the principal factors believed to contribute to increased sensitivity of high explosives to "setback" pressures.

An initial survey of cavitation as a major cause of increased sensitivity of Composition B has been completed. Supplementary work, based on this initial survey, is now underway. This supplementary work has broadened our investigation to include grit additive and rough interior-wall finishes, with cavitation, as principal factors in increased sensitivity of Composition B.

I. GENERAL

The first part of our current effort consists of "staircase" testing of various combinations of cavitation, added grit, and roughened interior surfaces of sample sleeve to determine the general statistical behavior caused by these defects in samples of Composition B.

A first run-through on "staircase" testing provided a number of test conditions in which normal staircase testing could not be maintained because of the physical limits of the test fixture. We had set 70,000 pounds-per-square-inch setback pressure as our limit, in order to prevent damage to the fixture. The less sensitive conditions, where 50% of the samples could be expected to detonate at 70,000 psi, or above, were not completed to sixteen samples for each test condition, but were stopped after the first run-through of eight samples. We have now been requested to complete these series to sixteen samples, still maintaining our 70,000 psi limit.

We are now conducting single-pressure-level testing, designed to determine lower probability-of-detonation levels, where 7%-10% of the samples are ex-

DAI-10-020 501 CRD-(P)-59

pected to detonate. These single-pressure-level tests are planned for the more sensitive sample conditions.

II. THE EXPERIMENTAL APPARATUS

The experimental apparatus is essentially a piston-cylinder machine, the piston acting on a sleeve-and-punch assembly containing the sample to be tested. The force on the piston is developed by burning a carefully weighed quantity of propellant powder in the cylinder. This quantity varies from one to five grams, approximately, to produce desired "setback" pressures from about 10,000 to 70,000 pounds-per-square-inch on the sample pellet. The sample pellets are cylindrical and have basic dimensions of one-half inch diameter and one-inch length. The propellant used is M-9 80 mm. mortar propellant. Pressure measurements are made by Baldwin High Frequency Pressure Cell and, recently, a cell provided by Picatinny Arsenal. Pressure is recorded by camera from an oscillograph.

During all of this testing, we have encountered a number of difficulties with our apparatus. The most troublesome difficulty has been frequent failure of our pressure cells. It is believed that the cell is subjected to extreme vibration by the machine, especially with detonation of a sample. This vibration is accentuated by the manner in which the cell is mounted, normal to the piston-cylinder axis. A frequent difficulty has been the breaking of internal electrical connections without any apparent damage to the cell, externally. We have a smaller and more rugged cell, now in use, provided by Picatinny Arsenal. This cell has been operating for over a month now, with no breakdown. It is apparently better able to stand vibration because of its physical characteristics.

III. EXPERIMENTAL DATA

The following single-pressure-level testing has been accomplished during

DAI-19-020-501-ORD-(P)-58

this report period. The prior staircase-testing is included with each sample condition for completeness.

<u>Sample</u>	<u>Propellant Weight (grams)</u>	<u>Test Result</u>	<u>Setback Pressure (psi)</u>	<u>Time to Peak (ms)</u>	<u>Rate of Rise (psi/ms)</u>
<u>Single - Pressure Testing (Cont.)</u>					
36	3.20	Negative	45200	3.0	15000
37	3.40	Negative	45500	2.0	22700
38	2.93	Negative	50100	2.0	23000
39	2.83	Negative	50200	7.0	25100
40	2.92	Negative	50200	2.0	25100
41	2.92	Negative	50200	2.0	25100

In addition to the preceding single - pressure tests, we have completed a series of control tests.

Control Test 33 - No cavities, smooth sleeve, sand added.

1	4.00	Negative	61300	1.0	61300
2	4.50	Negative	67700	1.0	67700
3	4.60	Negative	68200	1.0	68200
4	4.90	Negative	76000	1.0	76000
5	4.90	Negative	74200	1.0	74200
6	4.70	Negative	67200	1.0	67200
7	4.80	Negative	72300	1.0	72300
8	4.80	Negative	75000	1.0	75000

Control Test 34 - No cavities, smooth sleeve, no sand added.

1	4.70	Negative	68500	1.0	68500
2	4.80	Negative	72000	1.0	72000
3	4.70	Negative	70000		(estimated)
4	4.70	Negative	70000		(estimated)
5	4.70	Negative	71200	1.0	71200
6	4.70	Negative	68200	1.0	68200
7	4.70	Negative	65000	1.0	65000
8	4.70	Negative	68200	1.0	68200

Control Test 35 - No cavities, rough sleeve, sand added.

1	4.00	POSITIVE	90000	1.0	90000
2	3.00	Negative	41000	2.0	20000
3	3.50	Negative	65000	1.0	65000
4	3.55	Negative	65000	1.0	65000
5	4.00	Negative	73300	1.0	73300
6	3.57	Negative	68000	1.0	68000
7	3.58	Negative	65600	2.0	32500
8	3.58	Negative	65000	2.0	32500

DAI-19-C20-501-ORD-(P)-59

<u>Sample</u>	<u>Propellant Weight (grams)</u>	<u>Test Result</u>	<u>Setback Pressure (psi)</u>	<u>Time to Peak (ms)</u>	<u>Rate of Rise (psi/ms)</u>
<u>Control Test 36 - No cavities, rough sleeve, no sand added.</u>					
1	3.50	Negative	67000	1.0	67000
2	3.58	Negative	69400	1.0	69400
3	3.59	Negative	67400	1.0	67400
4	3.60	Negative	69400	1.0	69400
5	3.60	Negative	68400	1.0	68400
6	3.60	Negative	69200	1.0	69200
7	3.65	Negative	65000	2.0	32500
8	3.65	POSITIVE	70000	1.0	70000

NOTE A:

In these tests, the pressure-time record indicates some abnormality. The oscillograms show a high and rapid peak of pressure followed by an unusually low sustained chamber pressure, less than half that usually obtained by the same propellant weight.

IV. MAN-HOURS

A total of $548 \frac{1}{2}$ man-hours has been expended on this contract during this report period.

DAI-19-020-501-ORD-(r)-59
